Straw Sleighs

Launch Santa with the power of your lungs! How high can you make him fly?

For this you will need:

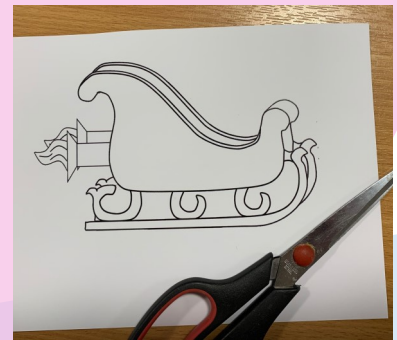

- Template
- A pipette
- Scissors
- A straw
- Tape
- Crayons

No printer? No worries, draw the outline onto a paper plate or piece of card.

No pipette? No worries, roll a tube out of paper and fold one end.

Follow these steps:

1. Decorate the template using crayons
2. Once you have finished your design cut it out
3. Turn the template over so it is face down
4. Cut the tip of the pipette off, so you have the squeeze end and about 3 cm of tube
5. Tape the pipette to the back of the template with the open end at the bottom
6. Put the straw into the pipette and blow!
